

DECKMASTER™ PowerHand™

Patent Pending

PowerHand is a powerful tool designed to save time and increase efficiency for deck installations. PowerHand is operated from a standing position allowing for optimum leverage and ease of use.

One PowerHand will make installing deck boards easier, but some professionals use two PowerHands in order to straighten the entire plank length prior to fastening. PowerHand will quickly pay for itself in increased productivity and ease of installation.

PowerHand is the tool you need to:

- ▶ **Straighten purlins and lighter wood structures**
- ▶ **Adjusting and tightening a floating floor**
- ▶ **Move planks together against a wall**
- ▶ **Move multiple rows with a single set up**
- ▶ **And many other applications**

▶ **Foot Brake**

Releasing PowerHand is as easy as pressing the exclusive foot brake.

▶ **Pull Clamp**

PowerHand's pull clamp securely attaches to deck boards to pull them into place.

▶ **Push Arm**

PowerHand's adjustable push arm clamps securely to any joist allowing PowerHand to push deck boards into place when needed.

▼ **Handle**

PowerHand's handle rotates to a 90° position providing optimum leverage.

Pull on the ball at the top of the handle to move the handle to a 90° or to a folded position for storage.
