GrabberGard® proves superior in these independent tests:

After 500 hours of Salt Spray Test...

After 15 cycles of Kesternich test...

GrabberGard's Unique Finish

Salt spray results ASTM B117 1000 hours, 15 cycles Kesternich per DIN 50018, no red rust

GrabberGard® metal finish is a high-grade proprietary metal surface processing technology that prevents corrosion. It is a duplex coating constituting a zinc substrate and organic polymer topcoat. The distinguishing feature of GrabberGard® is the joining and encapsulation the substrate with the fused organic surface coating. These layers are bonded together through thermal fusion, and this unique method of combining layers results in a combination of the coating films. GrabberGard® treatment does not attribute its anti-corrosion properties to any single material, but the synergy of these two layers, which when combined has superb corrosion resistant qualities. Suitable for use in non coastal areas with all pressure treated lumbers including ACQ.
